## PFS - Measurements Instructions

Please take a CLEAR DIMENSION, i.e. the measurements of the opening in which your pleated screen will be installed.

Carefully measure the inner distance from one jamb of the opening to the other, the upper and lower width, and the height on the right and on the left; remember that all measurements must be carried out looking at the opening from the outside, that is you will be outside the room, and that all measurements must always be given in inches.
