PFS – Product Information

The unique Pleated Fly Screens offer functional and decorative protection against insects. Ideal for large openings and limited reveal spaces operates smoothly and quietly with effortless opening and closing. Due to their versatility, elegance and easy maintenance, pleated flyscreens are becoming the preferred insect screen solution around the world.

A series of unique PFS cord tensioning systems is incorporated within the pleated polyester insect mesh to resist mesh blowouts in windy conditions and keep the mesh in position.

PFS mesh system that uses side cords at the bottom guide, for full or partial opening of the screen. The very low profile guide 7 mm allows easy access and the cord system prevents the mesh from dropping or blowing out. Bilateral one-leaf PFS opens from both sides, is very easy to handle and offers total freedom as it can be set open at any position.

- Width profile: 28mm
- Pleat width: 20mm

Extra options

- Pleated mesh in black (standard) or grey (by request) is available.
- Simple or magnetic closing.
- Custom-made, ready for installation
